Kepler Motors Motion Supercar

Good looking, fast, economical (sorta), but when we hear EcoBoost, we don't think supercar.

Sure it's got a *claimed* 800hp from a 550hp EcoBoost motor and a 250hp electric motor driving the front wheels but when we hear 'EcoBoost', supercar isn't the first thing we think of. It's a great motor but where's the V12? When we hear 0-60 in 2.5 seconds and a top speed over 200mph however, well that alters our thought making process a wee bit.

The Kepler Motors Motion is set to debut at the 10th Dubai International Motor Show (December 16-20). Press release below along with a [video here](#), which one staffer referred to as a Yokohama commercial.
